DRILL-OUT TOOL KIT FOR STRUT BOLTS, IN A PLASTIC STORAGE CASE

Applicable to Audi, SEAT and ŠKODA vehicles equipped with aluminium steering knuckles.

For example: Audi A4 (8E, 8H, 8K); A5 (8T, 8F); A6 (4B, 4G, 4F); Q5 (8R), A7 (4GA, 4GF), A8 (4D); SEAT Exeo (3R2, 3R5) and ŠKODA Superb (3U).

For the professional pre-drilling and drilling out of seized/stuck strut clamping bolts on aluminium steering knuckles. Necessary when changing the upper/lower control arm as well as track rod ends. This tool kit eliminates the need for the cost-intensive replacement of the complete steering knuckle with wheel bearing unit.

In order to prevent damage to the mudguard on vehicles with low-mount steering gear, the steering knuckle needs to be locked in fully turned position by means of the clamping device that comes with the kit.

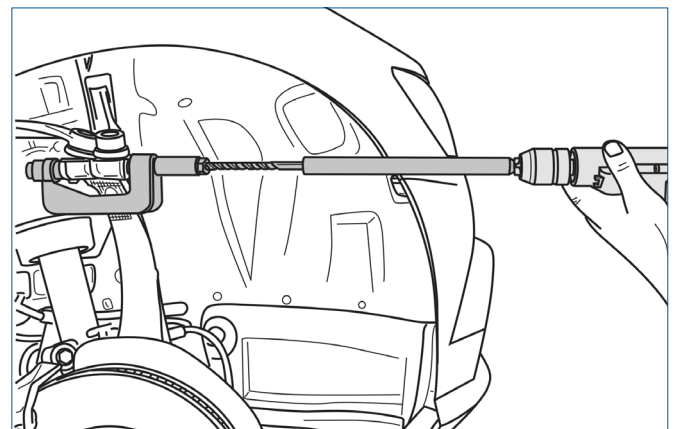

Made in Germany
